

BETTER CARE

Evidence-based Quality Assurance and Compliance

CareWatch® is an internet-based resource that helps improve resident assessment data accuracy and enhance care plans. Using the MDS, it highlights trends within the facility and for each individual resident. >>>

Better Data. Better Decisions.

>>> CareWatch® features a unique series of clinical Watch Pages that assists staff with every aspect of the RAI process to: improve MDS data consistency, conduct more thorough assessments, monitor quality, and support continuous improvement plans. This dynamic process prepares facilities for survey, helps obtain correct reimbursement, lowers cost, and enhances resident quality of life.

eHDS Logic Flags

Ensure MDS integrity and accuracy through a series of logic checks that calls out inconsistencies in your assessments BEFORE you submit them to CMS. This gives you the chance to make corrections to the assessments if necessary or justify with documentation as appropriate.

Transmission Watch

Transmit assessments directly to CMS via CareWatch. Receive your feedback reports, validation reports, and CASPER reports all in one place. Always know where your assessments are in the CMS submission process with the MDS Transmission Watch page. (see below)

Home > MDS Transmission Watch

Start Date: 06/21/2008 End Date: 06/21/2011 Facility: Ranchdale Display CMS State Alerts

Error Message:	11/30/2010 02:37PM		MDS Roster	Letellier, Deirdre		FAILED	Ranchdale	

Quality Measures

Track, trend, and monitor QMs through a series of reports and charts designed to identify where your facility stands in relation to state norms and other eHDS customers. Benchmark against other CareWatch facilities. Use SPC charts to determine whether quality issues result from data outliers, problematic facility processes, or QM inconsistency and unpredictability to focus staff and solutions on the correct issue. (see above)

Monitor Acute Care Readmissions

Maintain your status as a provider of choice. Track rate of re-entries, review admissions and discharge assessments, review length of stay between admissions and discharges, identify residents at risk, and monitor diagnosis trends.

Clinical Watch Pages

Strengthen care planning and enhance resident care through watch pages such as ADL Watch, Weight Watch, and Restorative Watch which monitor and track resident status as "Improved" or "Deteriorated" so that you can identify needed interventions.

State Watch Pages

Actively manage Medicaid payment, increase services to your residents, and ensure appropriate reimbursement for your facility. eHealth Data Solutions works with various state alliances, individual facilities, and other organizations to customize state specific Medicaid watch pages.

Survey Preparation

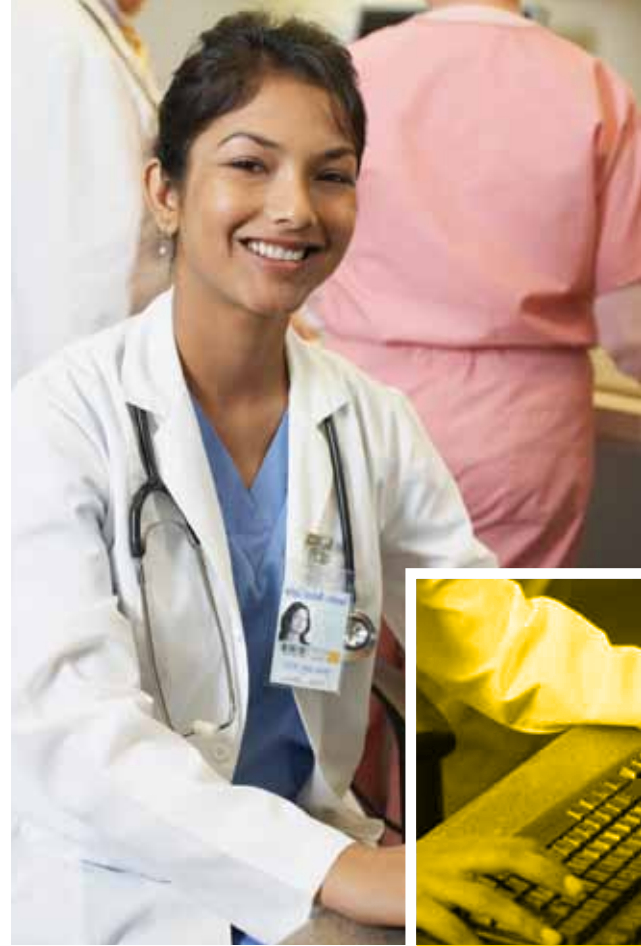

Manage your 802 and 672 reports online using the most current assessment data in the system. As MDS assessments are submitted to CareWatch, the data is pulled into the reports for the date range you select. This allows you to maintain your reports and a history of any changes you made so that you are always survey ready.

Enterprise Reporting

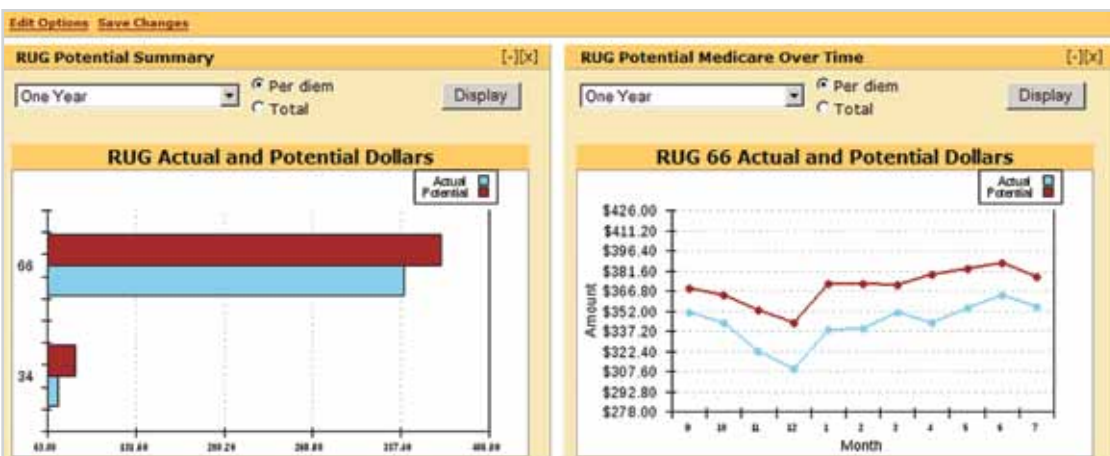

Follow your organization's progress with corporate reports that allow you to track use of CareWatch, review most common flags triggered, monitor benchmarks against other CareWatch facilities, compare QMs, and review the timeliness of MDS assessments and transmissions.

RUG Potential

Proactively manage your reimbursement for services provided and ensure optimal care for your residents by looking at your RUG groups before assessment transmission and planning ahead for the next MDS. This tool lets you see who may benefit by additional programs based on the assessment and helps make sure that you are properly reimbursed for all of the services and care you provided. (see below)

MONITORING TRENDS

BETTER CARE

>>> *eHealth Data Solutions*

eHealth Data Solutions is committed to providing innovative web-based tools for information and data management that improve the quality of long-term care. Our solutions – **CareWatch**,[®] **RiskWatch**[®] and **UBWatch**[™] – support evidence-based decision processes that increase productivity, reduce risk, and improve quality through cost effective, resident-centered care and services.

Our solutions provide leaders with opportunities for critical thinking, which leads to informed action. Informed action produces better results.

 **CareWatch**[®] features a series of clinical Watch Pages that helps staff track trends, monitor quality efforts, target reimbursement, maximize MDS accuracy and improve survey performance.

 **RiskWatch**[®] focuses on the adverse event process of investigation, response, and review to provide insight into root cause, reduce risk, decrease liability, lower insurance premiums, and improve resident care.

 **UBWatch**[™] detects and reveals unintended billing patterns that can lead to suspended claims, CMS audits, government demand for repayments, False Claim Act issues, under/over billing, and other missed opportunities that may result in lower revenue.

>>> *Unparalleled Training and Support*

Working together with your organization, eHDS will create and develop an implementation and training program based on the needs of your company. Trainings may include webinars (online sessions), onsite training, or a combination of the two. Your personal eHDS education representative and live help desk will also be available to you for continued assistance, including email and telephone support.

eHDS products are HIPAA compliant and provide disclosure accounting.
